

Élisabeth Morin for Fonds Écoleader

A graduate of UQAM's Master's degree in Environmental Science, Elisabeth has a diversified and multidisciplinary background. Having become interested in natural resources during his first academic cycle, the importance of sustainable development in companies led her to continue his studies in environment. Dynamic and persevering, Elisabeth is always looking for new initiatives to reduce environmental impacts. She has collaborated on various projects in life cycle analysis, the circular economy as well as zero waste and the eco-design.

Karl Côté presents

Waste management challenges and solutions in a Nordicity Context

Waste management in the North poses many financial and environmental challenges. The fact that communities are isolated, some without road access, and at a great distance from waste treatment services such as recycling plants and hazardous waste treatment facilities increases waste management costs. Some waste management practices have been adapted to the realities of the North but most are still underdeveloped in many communities. Available programs and funding are helping communities implement realistic solutions.

Karl has over 25 years experience in the environmental services industry as Professional Engineer, Regional Director, and in Business Development. With a strong history of working and developing business relationships with First Nation and Inuit communities and associations, in projects conducted in Québec, Ontario, Newfoundland and Labrador, Nunavut and the NWT, Karl Côté is actually Project Director | Northern and Indigenous Affairs at Sanexen – Services Environnementaux Inc.
